SKILLS

- **Languages:** Java, sql.
- **Frameworks:** Spring Boot, Spring MVC, Hibernate (JPA), Spring Security, Spring AI.
- **Frontend:** HTML, CSS, JavaScript, React (Fundamentals), Tailwind CSS
- **Databases:** MySQL
- **Tools:** Git, GitHub, Maven, Postman.
- **Concepts:** REST APIs, JWT, OAuth 2.0, OOP, Collections, Multithreading, DSA(200+ LeetCode problems)

PROJECTS

GramSathiAi : [GitHub](#)

- Built an AI-powered government scheme recommendation platform using **Spring Boot, Spring AI, React, and MySQL** to recommend personalized government schemes based on user eligibility.
- Developed a rule-based eligibility engine to recommend schemes based on age, income, occupation, category, state, BPL, and disability criteria.
- Integrated **Google Gemini** via Spring AI to extract structured user information from natural language and generate personalized scheme recommendations.
- Designed RESTful APIs and implemented DTO mapping using **ModelMapper** for seamless frontend-backend communication.

AI Helpdesk Agent: [GitHub](#)

- Built an **AI-powered backend helpdesk system** using **Spring Boot** and **Spring AI** to automatically respond to user queries.
- Integrated an **LLM via Spring AI using Groq's OpenAI-compatible API** to generate contextual responses and automate first-level customer support using AI.
- Exposed **RESTful APIs** for real-time query handling and ticket tracking.
- Implemented structured prompts and response handling to improve **accuracy of automated support responses**.

Authentication & Authorization Service: [GitHub](#)

- Developed a secure authentication and authorization service using **Spring Boot** and **Spring Security**, implementing user registration, login, logout, and **role-based access control**.
- Implemented **JWT authentication, access & refresh tokens**, and **BCrypt** password encryption to secure REST APIs.
- Built scalable backend architecture with **Hibernate (JPA)**, server-side validation, global exception handling, and **OAuth 2.0** integration for secure identity management.

WORK EXPERIENCE

Independent Backend Development — Self-Directed Upskilling | Mar 2025 – Present

- Transitioned from support engineering to backend development; independently built and shipped 3 full-stack/backend projects (linked below) to gain production-level depth in Spring Boot, Spring Security, and AI-integrated systems while applying for backend roles.

Technical Associate: Tech Mahindra — Sep 2024–Mar 2025

- Resolved 150+ application/auth/access tickets monthly via ServiceNow, maintaining 90%+ SLA compliance
- Collaborated with **infrastructure, database, and application teams** to investigate, escalate, and resolve complex enterprise incidents.
- Performed **technical troubleshooting and root-cause analysis**, documenting solutions, system workflows, and troubleshooting guides for knowledge sharing.

EDUCATION

- **MCA, AKTU – 2022–2024** CGPA: 8.16

CERTIFICATES

- Java Programming-**Beginner to Master**.
- Presented research paper at VPSM-ICON2024 on **cloud resource allocation, workload distribution, and cloud orchestration**.
